CASE STUDY · EAGLE VENTURE STUDIO

Building an agentic venture studio

From promising ideas to evidence-based venture decisions

THE CHALLENGE

Eagle needed to evaluate more ideas without making each one a costly, analyst-heavy project.

HOW IT STARTED

Arlington AI Advisors helped Eagle start an agent-based operating model and connected the team with implementation support.

WHAT EAGLE BUILT

A multi-agent system, coordinated by a chief-of-staff agent, that takes an idea from opportunity brief through validation, unit economics, and proposed market tests.

> "This is all the stuff people would hire MBAs to do."
>
> **Mark Crumblish, Co-Founder and CEO, Eagle Venture Studio**

Outcomes already visible

A repeatable workflow

Ideas move through defined stages, not one-off analysis.

Earlier capital decisions

Screening comes before deeper validation, so time and money follow the evidence.

Knowledge that compounds

Eagle's experience and criteria carry across every opportunity.

People at the important gates

The Eagle team approves validation, testing, investment, and launch.

> "Arlington AI Advisors isn't the expert in venture studios, but we knew AI agents, if deployed locally, could add tremendous value while protecting their process IP."
>
> **Marshall Smith, Co-Founder, Arlington AI Advisors**

Agents prepare the analysis. People make the capital decisions.
